

Environmental Policy

Management recognises the importance of the role SCS plays in society and the environment in which it operates. Committed to the cause of environmental sustainability, the company is committed to implementing and promoting the following policies:

Regulatory Compliance

SCS strives to be constantly aligned and compliant with environmental laws and regulations issued by the relevant authorities, maintaining a proactive approach in adapting to changing regulations.

Reducing Environmental Impacts

We will adopt organisational and technological strategies aimed at reducing the environmental impacts of our operations, with a particular focus on preventing pollution of water, air and other relevant environmental aspects.

Responsible Management of Natural Resources

We will conserve natural resources by reducing energy consumption, limiting waste of raw materials and ancillary products, and actively promoting recovery and recycling.

Integration of Environmental Aspects into Corporate Decisions

We will carefully consider environmental effects and the efficient use of energy and natural resources in decisions on new processes and related investments.

Responsibilities in the Supply Chain

We also extend our environmental commitment to our suppliers, encouraging them to manage their activities in accordance with environmental laws and regulations.

Continuous Improvement Targets

We will define and pursue specific goals to improve our environmental management over time, ensuring that these goals are achievable and measurable.

Staff Involvement and Awareness-raising

We will promote environmental awareness among our personnel by raising awareness, providing information and operational instructions to ensure that process activities are controlled in a sustainable manner.

ISO 14001-compliant Environmental Management System

We will organise our Environmental Management System according to the principles and requirements of ISO 14001, clearly distributing activities, responsibilities and assignments to ensure that the system is fully operational.

We ask all our stakeholders to actively and continuously cooperate in the implementation of these policies. This environmental policy will be made available to all internal and external stakeholders as a tangible manifestation of our commitment to a sustainable future.
